

## RECOMMENDED ADD-ONS LIST

### 1) Pie Menus Official

This add-on enables the use of a radial “pie” menu in the Blender interface, which allows the user to quickly switch between the different viewing options such as the camera view, side view etc.

**How to get it:** The add-on is Built in to Blender, enabled through “Official” section under the Add-ons tab in the User Preferences.

### 2) Silhouette

This add-on allows an animator to toggle a silhouette mode, which is great for posing your characters.

**How to get it:** The add-on is available to download in the course downloads, and can be installed by clicking “Install from File” on the Add-ons tab under User Preferences.

### 3) Ghost Frames

This add-on allows creating an advanced ghosting for your animation, like onion skinning, but it displays the model instead of the controls. Very useful for reviewing your animation.

**How to get it:** The add-on is available to download in the course downloads, and can be installed by clicking “Install from File” on the Add-ons tab under User Preferences.

### 4) Simplify Curves

This add-on Adds an option to simplify an animation curve, and remove redundant keyframes.

**How to get it:** The add-on is Built in to Blender, enabled through “Community” section under the Add-ons tab in the User Preferences.
